DETAILED ACTION

Change of Address

1. A change of address was received on 16 July 2004.

Declaration

2. An executed combined Declaration and Power of Attorney was received on 16 July 2004.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1 6, 8 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Sogard (US Publication No. 2003/0235682).

Sogard has a lithographic apparatus, shown in Fig. 1. The reference teaches controlling thermal distortion in the optical system by measuring (with 560) the shape of the optical element (28, 328, 528) at one or more locations; and then using the

Application/Control Number: 10/799,196 Page 3

Art Unit: 2851

measurement data to control a heating (550A, 550B) or cooling means to adjust or correct the shape of the optical element. See paragraphs [0016, 0081 – 0084].

Claims 1 - 6, 24

Both heaters (550A, 550B) heat the top surface of the optical element, see at least Figs. 3, 5A, 5B. Claim 8

The heaters are controlled at different temperature; the heat is varied in accord with measuring data. [0018, 0070 – 0077]. Claims 11, 12 - 14, 16 - 21

The optical element may have a reflective surface; see paragraph [0045]. Claims 9, 15

The stress is applied, by means of the mounting means, so that the result of the

measurement is held in a predetermined range; see paragraph [0054]. Claim 10,

12 - 14

The developing step is not disclosed but is an inherent step in manufacturing semiconductor substrates. Claim 25

Sogard does not disclose the linear expansion coefficient of the optical elements. The apparatus exposes substrates in the extreme ultraviolet range and only a select composition of material are used for the optical materials in that range; therefore, the linear expansion coefficient would be within the range claimed. Claims 22, 23

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2851

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sogard (US Publication No. 2003/0235682).

Sogard does not disclose the control regions at the rear of the optical element, but is common in the art to have a cooling means at rear of a mirror to control thermal changes that may occur. One of ordinary skill in the art would be motivated to use a cooling means in the recognized location to control the thermal expansion of the optical element.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Niibe et al. (US Patent No. 5,390,228) and Unno (US Patent No. 5,805,273 disclose detecting the temperature distribution to control the shape of an optical element.

Response Data

Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Rutledge whose telephone number is (571) 272-2127. The examiner can normally be reached on Mon - Thurs, 6:00 AM - 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Judy Nguyen can be reached on (571) 272-2258. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
